Radiology report: chest X-ray

FINDINGS: The cardiomediastinal silhouette is normal in size and contour. Aortic atherosclerosis. Hyperexpanded lungs. XXXX right perihilar/midlung density. Streaky bibasilar opacities, as well. Left upper lobe nodular opacity (anterior first rib interspace) may be exaggerated by overlapping bone silhouettes. Grossly similar midthoracic vertebral XXXX fracture. IMPRESSION: 1. No focal air space consolidation. 2. Nodular opacity at the left apex may be exaggerated by overlapping bone silhouettes. XXXX chest may provide further evaluation, if warranted.
